

Velinked Smart Fleet Management System

Year Accomplished
2024

Role/Position

Founder, Fullstack Developer.

<https://www.hellyoshaqiqie.id/project/driver-dashboard>

Project Description

Developed Velinked, a Fleet Management System designed to help fleet owners monitor, control, and manage their vehicles more efficiently. The platform consists of a web dashboard for fleet owners and a mobile application for drivers, allowing real-time vehicle tracking and control. The driver application also integrates expense reimbursement and attendance management, creating a more connected system for managing both vehicles and drivers. By combining IoT-based vehicle monitoring with operational management features, Velinked provides a centralized solution for transportation management and vehicle security. The project was awarded a Gold Medal at FIKSI 2024 in the Digital Technology category.

Vorce AI-Powered Human Resource

Year Accomplished
2025

Role/Position

Chief Information Officer, Fullstack Developer.

<https://www.hellyoshagiqie.id/project/vorce-platform>,
<https://www.instagram.com/vorceapp/>,
<http://www.vorce.id>

Project Description

Developed Vorce, a Human Resource Management Platform under PT Sama Mikro Solusi, designed to help companies manage and understand their workforce through a centralized digital system. The platform integrates employee data, attendance, tasks, KPIs, and performance management into a single environment, making it easier for companies to monitor and evaluate their teams. As CIO and part of the company's leadership, I was involved in shaping the product direction, business processes, and operational development of the platform. I also explored the integration of an AI-powered Company Assistant using Retrieval-Augmented Generation (RAG), enabling users to interact with company data and receive contextual insights and summaries from internal information.

VLinked Intelligent Workforce & Device

Year Accomplished
2026

Role/Position

Chief Information Officer, Team Leader, Fullstack Developer.

Publication Link

<https://www.hellyoshaqiqie.id/project/vlinked-desktop-agent>,
<https://vorce.id/vlinked>

Project Description

Developed VLinked as the result of the merger between Velinked and Vorce, combining fleet management and human resource capabilities into an integrated digital platform. VLinked focuses on device monitoring and management by connecting employee information with company-owned devices, enabling organizations to monitor device status, usage, productivity, and application activity through a centralized dashboard. Employees use a desktop application connected to the owner's web dashboard, allowing device activity and information to be synchronized and managed centrally. By connecting workforce and device data, VLinked provides a more integrated approach to managing employees, devices, and organizational operations.

ClimatiX Digital Carbon Management

Year Accomplished
2026

Role/Position

Project Lead, Fullstack Developer,
IoT Developer.

<https://www.hellyoshaqiqie.id/project/climatiX>,
https://www.instagram.com/p/DYClexLEg-m/?utm_source=ig_web_copy_link&stkn=MzRIODBiNWFIZA==

Project Description

Developed ClimatiX, a climate-tech platform designed to improve carbon monitoring and carbon credit management through the integration of IoT, AI, cloud computing, and blockchain. The platform enables environmental data to be collected through IoT sensors, processed and analyzed using AI, and managed through a cloud-based system for more transparent and real-time monitoring. Blockchain technology is integrated to support transparent carbon credit management and trading. I developed and refined ClimatiX from its initial concept into a more comprehensive solution, focusing on how technology can address limitations in conventional carbon monitoring and verification processes. The project was developed through the Inovasi Muda Green Jobs program and received the Best Presentation award in the Green Jobs Initiative Competition 2026.

WearOcean Wearable Maritime Safety

Year Accomplished
2026

Role/Position

Team Leader, IoT Engineer.

Publication Link

<https://www.hellyoshaqie.id/project/sms-vest>

Project Description

Developed WearOcean as a PKM-KC 2026 student research and engineering project, focusing on improving maritime safety for coastal fishermen. WearOcean is designed as a smart safety vest that integrates water and motion sensors, an SOS button, GNSS, and LoRa communication to detect emergency situations and transmit the user's location to a monitoring system. The system uses ESP32 for edge processing, while a LoRa-based gateway forwards telemetry data to the cloud and dashboard. Through this project, I explored how embedded systems, IoT, wireless communication, and real-world user needs can be combined into a practical safety solution.
